WHO ACTUALLY WINS the UI generation race?

CURSOR

Figma Make

bolt.new

Lovable

v0

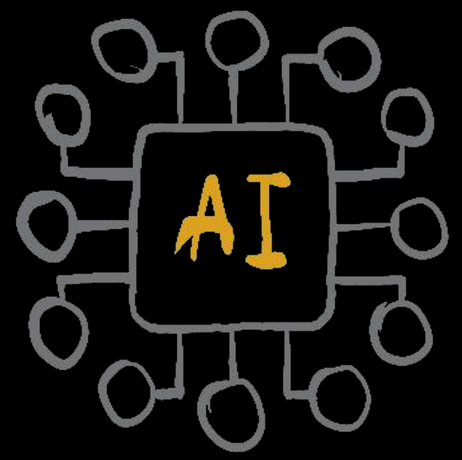
Whoever acquires Françoise

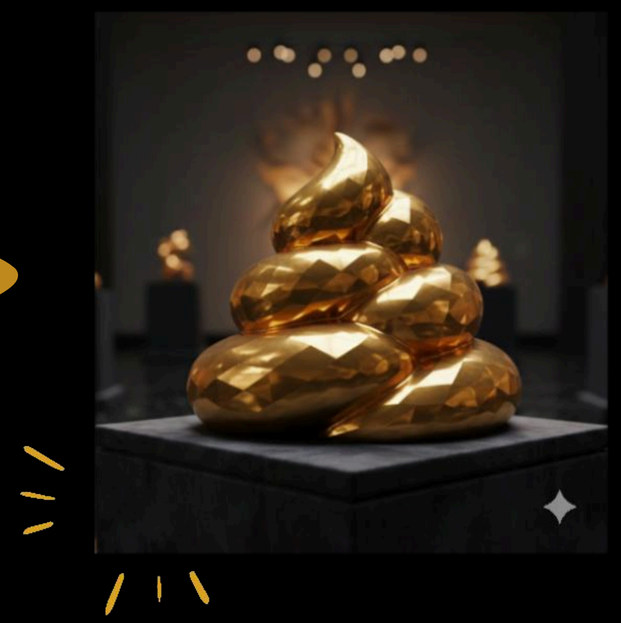
Pre-Seed Round

The Last Mile solution

Turning AI generated chaos into production-ready code

YOU HAD A BRILLIANT IDEA. AI TURNED IT INTO… THIS





The UI generation race has the same flaw multiplied by enterprise design systems and mandatory accessibility compliance.

Enterprise breaks.

Design Systems

AI misses thousands of tokens

Even top-tier models hit a 70% ceiling and the rest is manual cleanup

Accessibility

A legal nightmare

GPT-5 Mini: 31% WCAG pass rate
Claude 4.5: 0%

Cost

40–60% of dev time is wasted fixing hallucinated layouts

AI builds.

ENGINEERED FOR ABSOLUTE PRECISION

99.2% accuracy across complex production design systems.

Works with any UI generator via HTML, DOM, or Figma API.

Hybrid Governance Engine

Custom DSL Engine

Deterministic Layer

We translate the design system into our proprietary language.

```

  "id": "hierarchy_01",
  "rule": "non_incremental",
  "severity": "CRIT"
}
```

Specialized AI Nodes

Contextual Intelligence

An ensemble of lightweight Open-Source neural networks, fine-tuned for domain-specific tasks.

- CV Node: Visual Anomalies
- LLM Node: Content Semantics

Nvidia NIM Stack

Infrastructure

Self-hosted inference. Total control over latency and data security. Highly optimized on Nvidia architecture.

- TensorRT
- NIM Microservices

99.2% Precision **Private On-Premise** **For SOC2/ISO Ready**

Validated by largest e-commerce in Eastern Europe

The window

1. The Regulatory Hammer

EAA 2025 is here.

Accessibility is no longer a 'nice-to-have'—it's a €1M liability.

2. The Generator Gold Rush

$50B+ deployed into UI generators

(Lovable, v0, Bolt, Figma Make). Every generator = a client who needs governance.

3. The Production Gap

Enterprises want AI-generated UIs

but 68% can't move prototypes to production. Design systems, compliance, and code quality block adoption.

AI GENERATION IS SCALING EXPONENTIALLY

HUMAN OVERSIGHT IS NOT

The gap — is our market

Market

TAM	**~$7.7B**	*Design QA + Accessibility + AI UI Governance*
SAM	**~$2.5B**	*Enterprise with 20+ designers in regulated industries + AI generator users*
SOM (year 1)	**$1–3M**	*15-30 clients × $25-75K*

Design Systems CAGR 8.5-12%.
AI code tools CAGR 27.1%

Figma Integration

700+ Cities / 200M+ Users. Tech Scoping stage.

JISR

#1 HR-Tech in KSA

3,000+ Enterprises / MENA Leader. Mid-stage / Validation.

PIPELINE: 60% Enterprise / 40% Mid-Market
Sectors: FinTech, MedTech, HR-Tech, EdTech.

Started January 2026
NVIDIA Inception | Delaware C-Corp

BUSINESS MODEL

Tier	Price/year	
Base Platform	**$45K**	Unlimited designer seats to ensure wall-to-wall adoption. Includes core verification engine, dashboard, and compliance history.
CI/CD Integration	*+ $10K*	Automated pipeline gates to block non-compliant code from production. Seamlessly integrates with Jira, GitHub, and GitLab.
On-Premise	*+ $20K*	Private Cloud / VPC deployment for FinTech & BigTech. Ensures all data remains within the client's secure perimeter.

85% gross margin · 12–14 mo CAC payback · Total Max ACV: $75K / year

Next step: Governance-as-a-Service API for generators. That's the next round

GTM

We are shifting from top-down friction to bottom-up adoption.

The Problem

Standard pilots require CFO approval and 3-6 month cycles. It turns our champions (Design Leads) into "budget-beggars."

The Hack

Single-Squad Entry ($199-$299/mo) Priced below the standard $500 corporate card limit.

The Land & Expand Play

Same-day setup via corporate card.
Undeniable ROI within 60 days.
Organic spread across teams leads to a $45K+ Enterprise consolidation.

Status: Rolling out this motion to unblock current pipeline deals.

Direct Outreach

Now

LinkedIn outreach to Design Ops & Frontend Leads

+ Product Managers (testing)

Curated company list with multiple touchpoints per org

Expected metrics: *10% conversion to demo*

Content & Community

Next 6 months

Strategic partnerships: *Figma Community, Medium, YouTube*

SEO optimization: *New single-team subscription tier → consumer-friendly website + AI tool comparison rankings*

Events: *Speaking at conferences, podcast circuit*

The Flywheel

Scale

Beta Influence: *Partnering with industry leaders for viral proof.*

Technical Moat: *Universal HTML Adapter makes us the infrastructure layer for all AI generators.*

Viral Growth: *Single-squad adoption naturally triggers cross-department expansion.*

Marketing

WON'T THEY JUST BUILD IT THEMSELVES?

Figma Check	*Françoise validates complex, context-aware business logic.*
Lovable / v0 / Bolt	*Françoise acts as a Governance-as-a-Service independent arbiter.*
TestSprite (AI QA)	*TestSprite focuses on functional bugs and general logic. Françoise guarantees compliance with specific brand design systems.*
Zeroheight / Supernova	*Design system documentation Static docs, no automated verification against live layouts*
In-house QA teams	*40–60% dev time cost, no scalability, no audit trail*

Snyk didn't compete with GitHub. Snyk grew to $7.4B alongside it.

30 enterprise logos · 5K+ active users · $2M ARR · CAC payback 9mo

18 months Roadmap

Months 0–6

Manual QA tool pilots, HTML Adapter prototype

Budget: $250K · Burn: $42K/mo

Target: $75-100K ARR, 3-5 enterprise clients

Months 7–12

HTML Adapter launch (all generators), marketing push

Budget: $500K · Burn: $83K/mo

Target: $250-400K ARR, 10-15 enterprise + 50-100 dev teams

Months 13–18

DS automation, API partnerships (v0, Bolt)

Budget: $750K · Burn: $125K/mo

Target: $2M ARR, 120%+ NRR, 30 enterprise, 5K+ users
