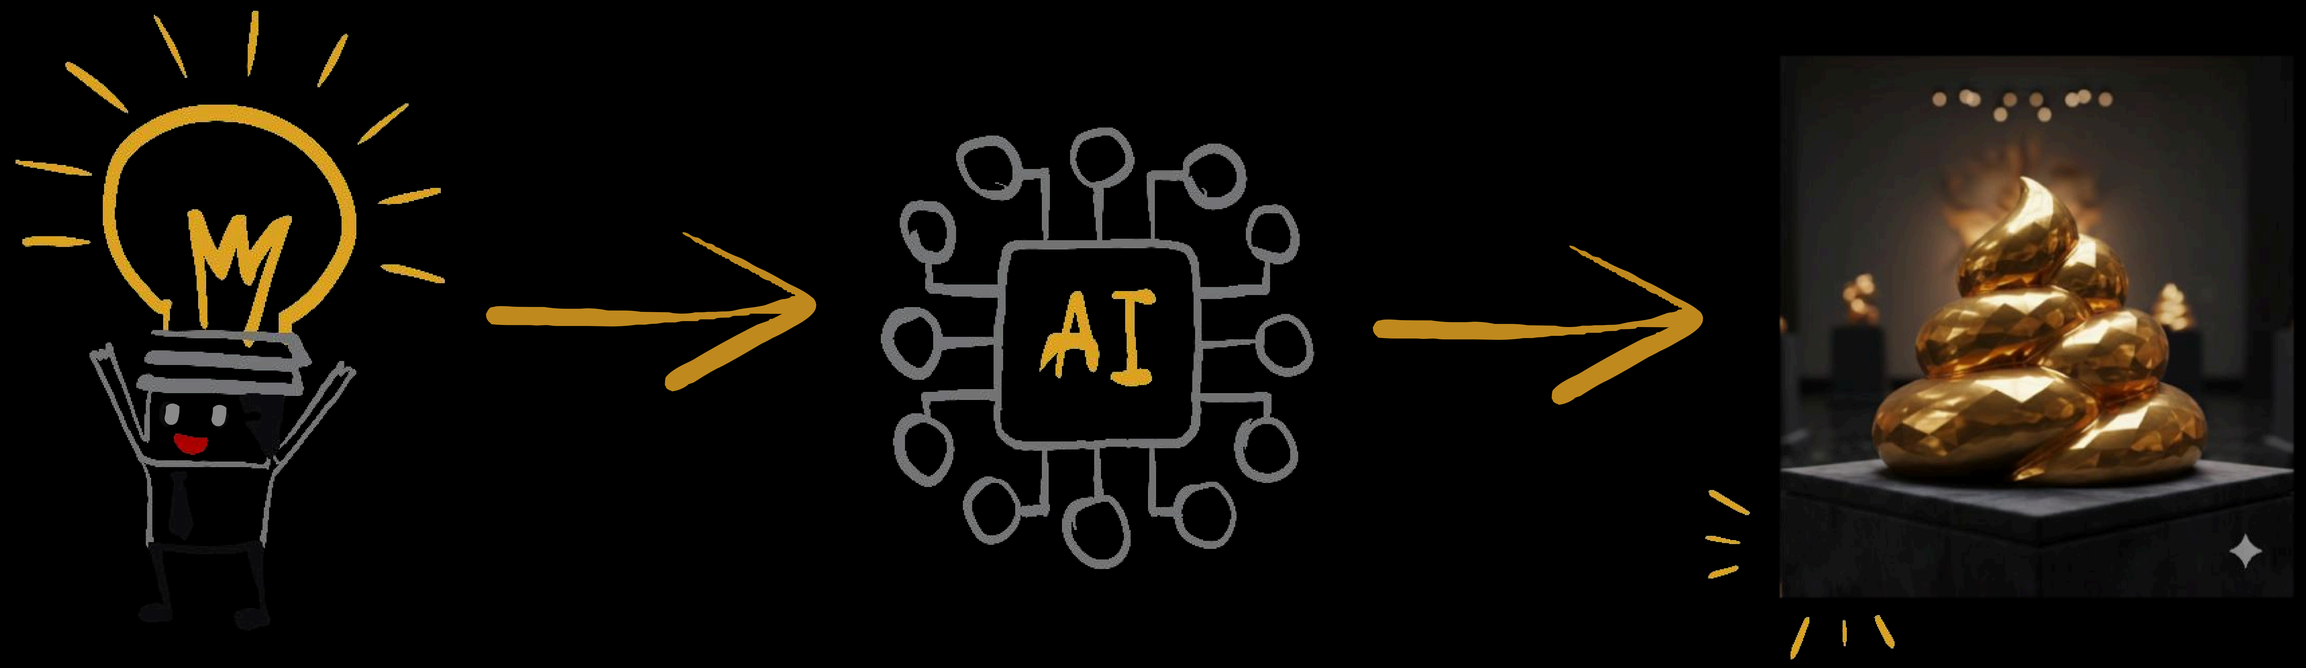
YOU HAD A BRILLIANT IDEA. AI TURNED IT INTO… THIS



In UI generation, it’s the exact same story

AI generates UIs 10x cheaper, but

Accessibility

$1M+ Legal Liability

With the EAA 2025 regulations coming, non-compliant UI is a massive legal risk.
GPT-5 Mini: 31% WCAG pass rate.

Fixing cost

40-60% Dev Time Wasted

Engineers waste half their time manually fixing hallucinated layouts and broken design system components.

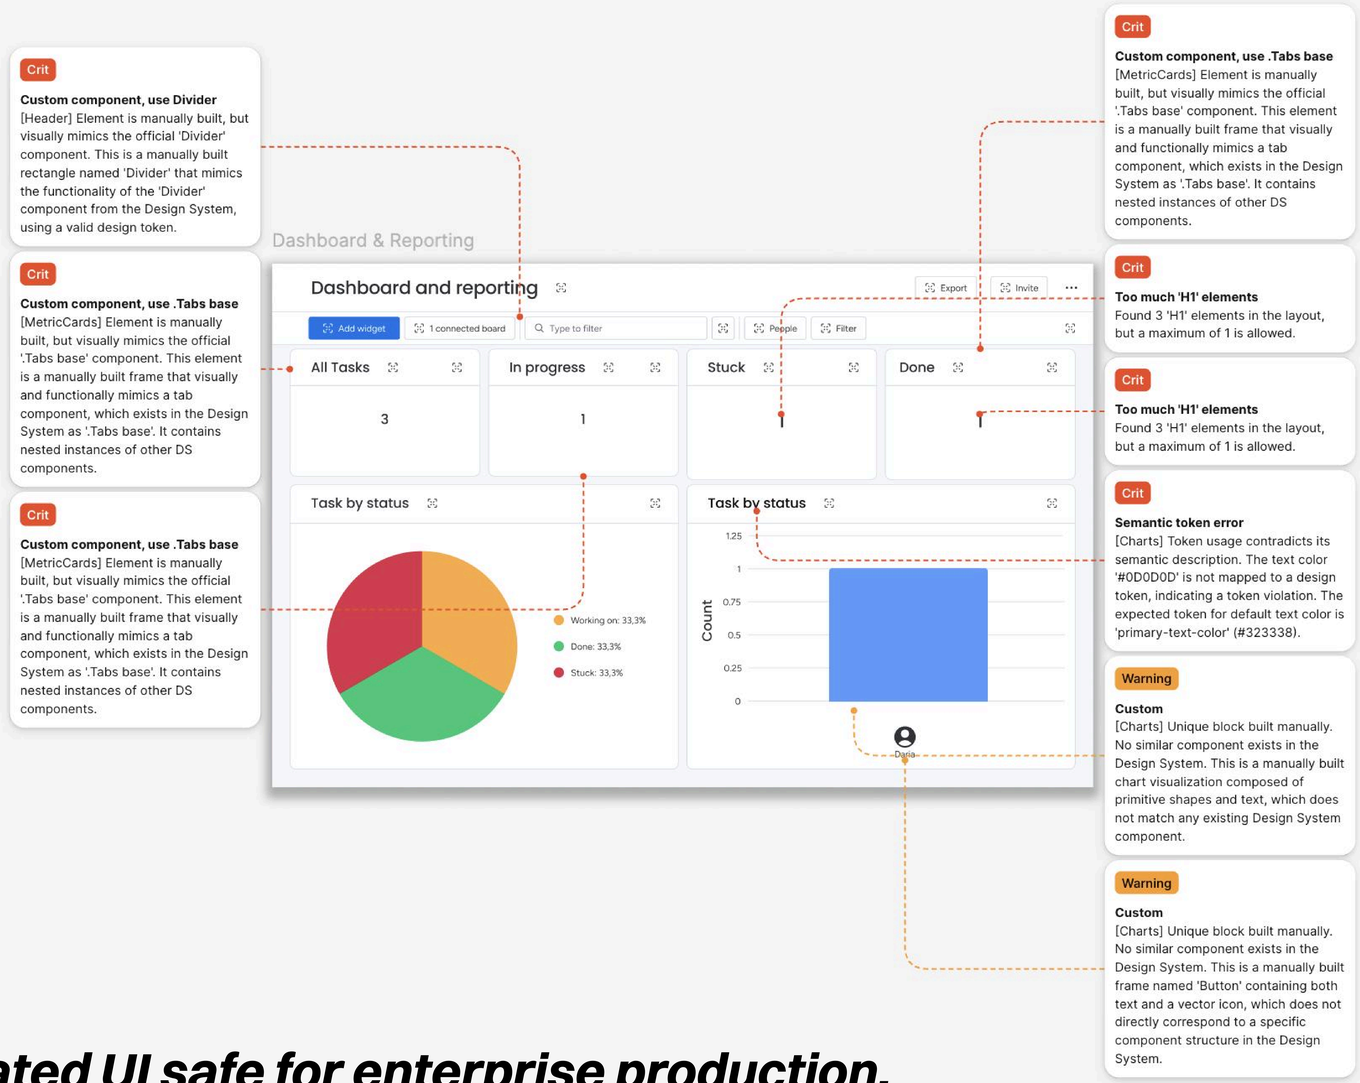
not for $30B+ UI production market

FRANCOISE DESIGN

Automated Governance-as-a-Service

Françoise instantly detects undocumented overrides, token semantic errors, and WCAG failures before they reach the code.

Watch Demo



The verification layer that makes AI-generated UI safe for enterprise production.

Traction

Cold-to-Call conversion: 6% in 3 months.

TIER-1 ECOM

800-person design org

Paid pilot completed. 99.2% accuracy on enterprise data.

MICROSOFT

Global Ecosystem

Letter of intention. Waitlisted for our compliance layer.

INDRIVE

200M+ Users

Vendor compliance stage for paid pilot.

Dozens of enterprise deals in active negotiations and 20+ companies on the waitlist.

Proprietary technology

Our Hybrid Governance Engine (Custom DSL + Specialized AI Nodes) understands complex, context-aware business logic that others miss.

vs. In-house QA: We provide infinite scalability with zero manual hours.

vs. Native Figma / Generative AI: They focus on creating; we focus on independent, deterministic verification.

The Moat: 100% Private On-Premise deployment for FinTech & BigTech.

Business Model

Target: Enterprises with 50-200 product designers in regulated industries.

PRICING TIERS:

Base Platform: $45K / year / 50 seats

CI/CD Integration: + $10K

On-Premise Deployment: + $20K

Metrics: 85% gross margin | 12-14 month CAC payback.

Daria Kamyshina

7 years launching and scaling products + 1 year running a specialized AI-in-design implementation agency.

Victor Kamyshin-Pisarevskii

8 years as Tech Lead in high-load systems at a top-tier FinTech bank. Architect of the Hybrid Engine and Custom DSL.

Both founders hold degrees in Applied Mathematics and CS from Bauman University (the MIT of Eastern Europe).

(we are siblings)

RAISING $500K TO UNLOCK OUR SEED ROUND

$30K F&F already secured.

The Goal: *Bridge the gap between our current traction and enterprise-grade deployment.*

The Catalyst: *Converting the pipeline into 2-3 enterprise contracts ($100K ARR).*
This milestone triggers our $1.5M Seed round (in active talks with Target Global & Enable Ventures).

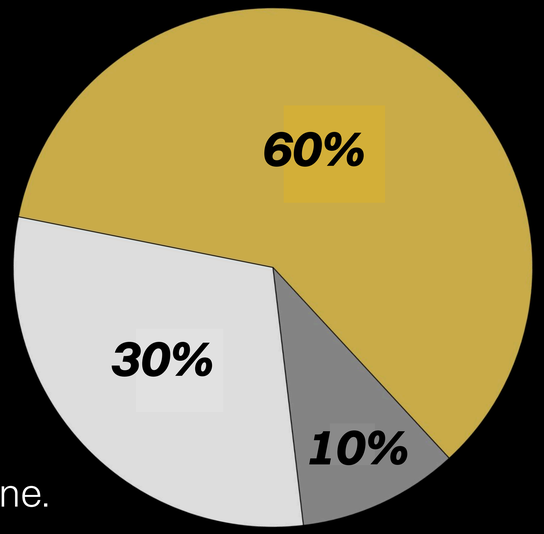
Engineering & Product

Building the On-Premise infrastructure for FinTech/ BigTech and launching the Governance-as-a-Service API for AI generators.

Enterprise GTM

Passing security audits and expanding the direct sales pipeline.

Legal & Ops



We win,
no matter who wins the AI generation race.

Lovable, v0, Bolt, or Figma creates the same compliance chaos. We are the universal infrastructure layer they all need to reach enterprise production.
