Françoise

The Semantic Infrastructure Layer for Enterprise UI

Raising $3M
to scale enterprise infrastructure & platform distribution

Enterprise UI Is Breaking AI Unit Economics

$64.3B Model & API Spend

Makes inference compute the fastest-growing cost center in corporate IT.

5x+ Workflow Cost Surge to 2028

Despite falling per-token prices. Multi-step reasoning loops multiply massive context payloads across every single retry.

GARTNER (2026 AI SPENDING FORECAST & "THE INFERENCE PARADOX" REPORT)

Unbounded UI Context Bloat

Direct-to-code UI generation gives models too many degrees of freedom. Every minor layout fix creates a cascading snowball of hallucinations, burning millions of tokens on structural noise before a valid screen renders.

10x Cost Reduction
in Enterprise UI

Compiling raw visual intent into synchronized code

Zero Token Waste

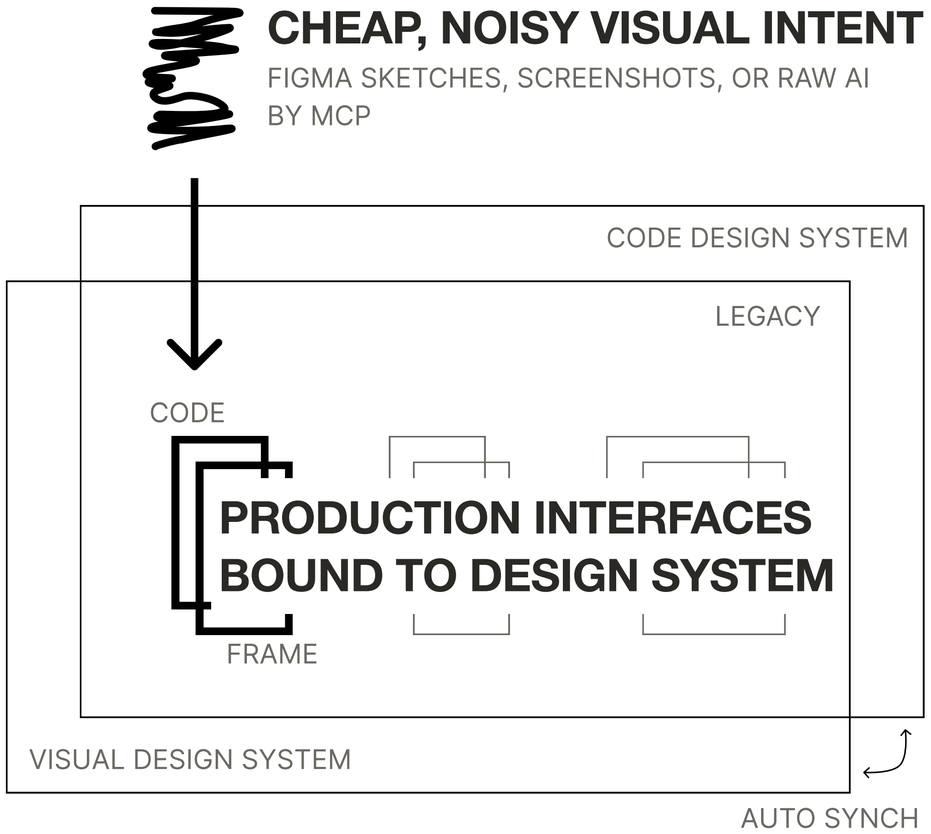

By intercepting structural noise before it hits the LLM, we slash API spend and deliver zero-refactoring code.

Bi-Directional Synchronization

Our neutral UI IR compiles loose canvas sketches into code, and syncs codebase changes back to Figma.

100% Intent Preserved

All copy, visual hierarchy, and design system overrides remain strictly intact.

Independent Math Architecture

While GenUI startups race to build basic LLM wrappers, we've built deep compiler infrastructure that cannot be easily replicated.

Deep Algorithmic Barrier

Transforming unstructured visual layouts into strict, deterministic component trees is mathematically complex. We spent a year engineering a proprietary compiler and graph topology engine. This deep R&D cannot be replicated by simply chaining API calls.

Incumbent Blindspot

Figma is structurally disincentivized to build a neutral layer that makes cross-platform portability frictionless. AI platforms are focused on basic rendering speed, ignoring deep enterprise legacy integration.

$33B Product Creation Workforce

Expanding Beyond Core Designers

Figma estimates a $33B total addressable market for collaborative software design. This calculation moves beyond the isolated core UI/UX designers, encompassing the 30M+ front-end developers, product managers, and broader workforce actively participating in the design-to-production lifecycle.

The Agnostic Infrastructure Play

Françoise monetizes this massive $33B workforce by supplying the missing deterministic translation layer to the platforms they already use.

Capturing the Technical Debt Budget

Over 40% of frontend engineering payroll is currently wasted on manual UI reconciliation and maintenance. Françoise unlocks enterprise budgets by turning this daily friction into an automated, background utility.

Business Model

$50K base + volume tiers

Enterprises with Internal AI Agents

Cutting token waste, freeing engineering time from manual rework, locking outputs to design systems.

AI Platforms & Agent Builders

Slashing model inference costs and allows platforms to offer higher generation limits at lower user prices

SOM

$120M–$150M ARR

$100M ARR: 1,000 corporate accounts at $100K mature ACV
$25M–$50M ARR: 50 high-volume platform partners

Traction & Validation

100+ Global Discovery Interviews

Conducted across international engineering teams over 18 months to map structural UI flaws.

35 Enterprise Systems Validated

Benchmarked on complex corporate design systems by a closed cohort of beta engineers.

7 Engineering Teams Tested

Including global mobility unicorn inDrive.

The Team: Built for Scale & Deep R&D

Daria Kamyshina CEO

Ex-Yandex · Computer Science BSc

Led cross-functional R&D organizations of 300+ people.
Drives complex B2B enterprise sales, strategic vision, and infrastructure GTM.

Victor Pisarevskii CTO

Ex-Sber · Applied Math MSc

Architected mission-critical systems for 10M+ active users.
Creator of the proprietary UI IR and auto-DS compiler algorithms.

ACADEMIC FOUNDATION

Shared background as **Math & Physics Olympiad finalists** provided the foundation in graph theory and discrete optimization necessary to solve UI reconciliation without relying on LLM guesswork.

$3M to Scale Enterprise Distribution & Industry Standard

45% · GTM & OEM

Founder-led enterprise sales, platform partner expansion, and solutions engineering.

30% · ADAPTERS & SCALE

Finalizing the Production API, MCP infrastructure, and ecosystem connectors for seamless embedding.

25% · ENTERPRISE READINESS

SOC2 compliance, corporate procurement capabilities, and a strategic operating reserve.
