Deterministic Interface

Infrastructure for AI Agents

Slashing UI generation costs **by tens of times**
while eliminating visual and code hallucinations.

TAM (27%+ CAGR)*

\$28B+

AI Code & UI Tools

AI UI Generation Has a Negative ROI

\$7M in 4 Months

Budget Burn

Uber exhausted its full-year AI budget in 16 weeks on agentic coding

FORBES / THE INFORMATION

2x Code Churn

Drift & Tech Debt

AI code doubles churn and increases copy-paste bloat by 48%

GITCLEAR 200M+ LOC STUDY

3–10x Token Multiplier

The Structural Flaw

Blind retry loops resend full context windows, compounding API bills

ARXIV / CASE STUDIES

Feeding raw pixels to LLMs is fundamentally unscalable even with cheaper tokens.

\$11.6B SAM (32% CAGR)
UI/UX market

MORDOR INTELLIGENCE

Deterministic UI Compilation

1. Early Interception — Prevents Context Bloat

Captures rough sketches, wireframes, or raw mockups levels earlier, preventing bloated context from reaching the model

2. Deterministic Assembly — Eliminates Drift & Hallucinations

Algorithmically snaps UI elements to exact enterprise tokens and components via math

3. Production-Ready Output — Removes the Refactoring Tax

Directly outputs clean, system-compliant frontend code or Figma layouts, ready to ship without manual rework

↓ **10x**
UI production cost

Product Architecture

THE CORE

Proprietary deterministic compiler operating as the single source of truth across design, tokens, and code.

FIGMA COPILOT (LIVE)

Viral bottom-up adoption, stress-testing design systems, and building the initial enterprise lead list.

**FREEMIUM + \$50/SEAT/MONTH
FOR DESIGN TEAMS**

MCP / Agent API (NEXT)

Enterprise infrastructure sold top-down to VP of Engineering and AI Platforms.

**\$10K–\$25K Pilots →
\$60K–\$100K+ Annual**

Traction

Product launched August 2026 following core R&D

FIGMA COPILOT

Adoption & First Revenue

30 active B2B users; first corporate seats converted organically via self-serve.

Enterprise Interest

40+ accounts in direct talks (Verizon, inDrive, Vinted); 30% conversion to pilot evaluation.

Engine Stress-Test

Validated across 35 enterprise design systems and live production files.

MCP / AGENT LAYER

Distribution Pipeline

Integration partnership in progress with a Series A Figma-to-code leader (\$20K+ MRR target)

Technical Validation

Architecture endorsed in direct technical discussions with W3C leadership and Microsoft AI lead.

Defensible Moat

PROPRIETARY CORE

Non-Parallelizable R&D

Canonical UI representation and semantic merge algorithms suffer from extreme core coupling. Adding engineering headcount **cannot compress 12+ months of serial R&D.**

PLATFORM DILEMMA

Incumbent Lock-in

Figma is structurally disincentivized to build neutral compilation and migration layers that make customer exit and cross-platform portability frictionless.

Accumulated Decision Graph

Every automated merge, migration, and resolved conflict builds an **institutional memory of enterprise UI rules.**

Competitor Focus

Canvas alternatives and GenUI startups are racing for basic rendering speed and retention, making deep compiler infrastructure a fatal distraction.

As the only deterministic engine across multi-platform UI representations, **Françoise sets the category standard.** Leaving means regressing to AI drift, broken systems, and runaway costs.
