The Deterministic UI Compiler

US Delaware Deep-Tech infrastructure

Pre-seed $3M

CEO@FRANCOISE.DESIGN AGENTIC DEMO

TAM (30% FRONT-END MARKET)

$216B

Front-End Drift Waste

SAM (60% TAM)

$130B

Enterprise UI Drift Spend

COMMERCIAL MODEL

$50K base

+ volume-based tiers

Raw intent → Deterministically compiled via Design System → **Production UI**

13x* Total UI Delivery Cost Reduction

THE PROBLEM

Interfaces are split between canvas and code

Massive screen mutation velocity + tiny layout flaws risk millions in lost revenue and regulatory fines.

Keeping these two halves in sync **burns ~30% of front-end capacity** on manual drift policing.

Enforcing strict design systems crushes AI agents into **exponential token waste** and endless retry loops.

THE SOLUTION

Noise-Tolerant Compiler and UI IR

Solving a decade-long unsolved problem in computer science.

- **Proprietary Interface Graph**
- **Automated Ingestion**
- **Contrarian R&D Advantage**

- **Eliminates agent retries**
- **Automated Legacy Reconciliation**
- **Bi-Directional Canvas-to-Code Sync**

TEAM

CEO, Daria Kamyshina
Ex Product lead, Yandex, Comp Science BSc

CTO, Victor Pisarevskii
Ex Tech lead, Sber, Applied Math MSc

TARGET CUSTOMERS

- Enterprises with Internal AI Agents
- AI Platforms & Agent Builders

TARGET REVENUE

$5M+ ARR (18m)

Initial pilot benchmark. Updated order-of-magnitude gains demonstrated live on the call.
