Françoise

Deterministic UI compiler for autonomous code-generation agents

Built on our breakthrough in error-resilient layout synthesis

Enterprise UI

Scale (1,000+ Screens)

Distributed teams ship web, mobile, and internal portals in parallel.

Asymmetric Risk

UI directly drives conversion, brand trust, and compliance.

Lacks a single source of truth; handled as a loose sum of pictures and code.

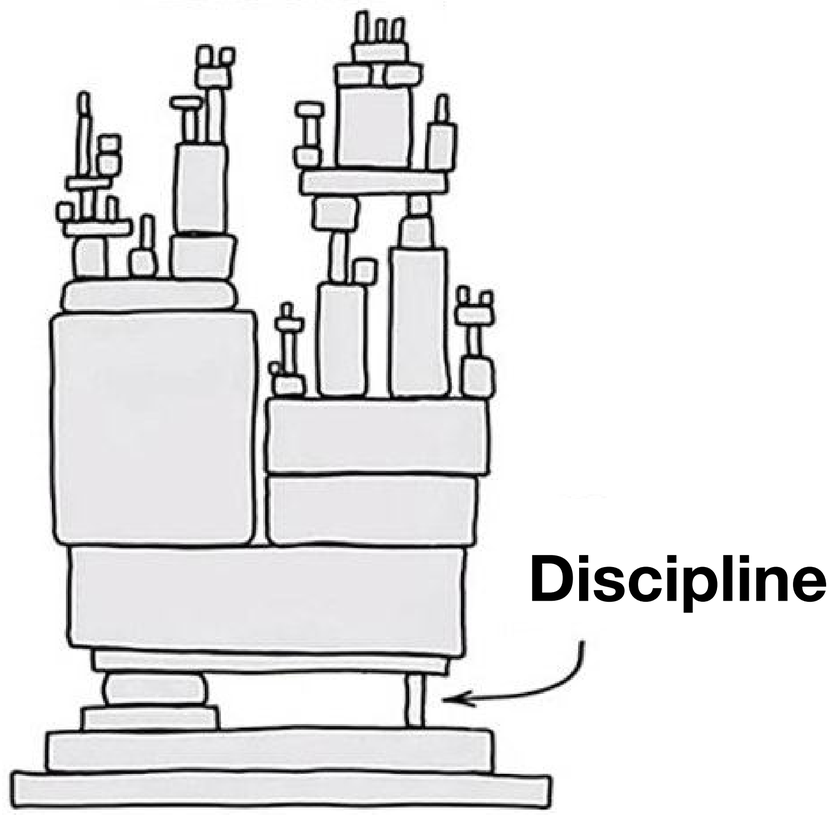

The Flawed Fix: Design Systems

Enterprises try to assemble screens like Lego, but manual handoff and AI hallucinations break the bridge.

UI Drift burns ~30% of front-end capacity

on maintenance and manual rework.

STRIPE & FIGMA

The breakthrough: Noise-Tolerant UI Intermediate Representation

Academia proved UI compilation requires an IR.
Prior implementations failed due to **brittleness** under real-world layout noise.

Raw intent → Deterministically maps → **Enterprise UI**

Proprietary Technology

Stateless Architecture

Contrarian R&D Advantage

Technical Risk Eliminated

7 Proof Of Concepts
Hundreds of real-world edge cases resolved.

2 Enterprise Pilots
inDrive (global mobility) and Tier-1 Enterprise E-Commerce

37 Design Systems
7 public industry standards + 30 closed proprietary libraries

Resolved hundreds of real-world edge cases

100x Delivery Cost Reduction

DEMO MCP SERVER

Proved in token spend, directly eliminating the debugging and drift.

Model & Market

UI compiler for agents

- **Enterprises with Internal AI Agents**
- **AI Platforms & Agent Builders**

$50K base + volume tiers

Front-End Design-to-Code Waste

$216B TAM

Enterprise & Mid-Market UI Delivery

$130B SAM

$1-6B SOM

Up: Direct Enterprise Platform + Embedded OEM Layer
Down: 16k Accounts × $60k ACV + 25 Platforms × $300k OEM API

Team

CEO

Daria Kamyshina

Ex Head of Product

Computer Science BSc

CTO

Victor Pisarevskii

Ex Tech lead for 10M+ active users

Applied Math MSc

Olympiad Minds & Fresh Eyes

Approaching UI as mathematical outsiders allowed us to bypass industry biases and engineer the deterministic graph reconciliation layer that academia and big tech missed.

Pre-seed **$3M**

45% · GTM & Solutions
30% · Adapters & Scale
25% · Enterprise Readiness

$5M **ARR target**
